### Taltioni open health information interfaces for application developers

October-November ICT-building focused on the bowels of the earth to think of new applications terveystietovarantojen utilization of health care. Taltioni Codefest yielded a day with plenty of interesting application blanks.

People with asthma directed the award-winning application, the team members received the Lumia phones. Coding for the team and initiators of Oscar Honkonen, Albums Ketonen, Heidi Parisod, Rajala, Mikko Salminen and Juuso.

Taltioni in the last decade in the mid Sitra, arising from the project, the aim of which was to create a database and a service platform, which the public and the health and well-being service providers to store information on well-being. Taltioni the summer of 2012 had progressed to the stage where it was set up to manage the cooperative. Private, public and third sector actors to join Taltioni is already 59 members, who continue to Taltioni ecosystem development.

- The volume is every Finn personal health account to which his personal health data can be stored. At the same time the volume is mounted in the service and integration platform, ecosystem and development platform for eHealth services. The aim has been to get people to take more responsibility for their care themselves, says Codefestin participants Taltioni Introducing **Pekka Turunen** Taltioni cooperative.

Pekka Turunen Taltioni cooperative presented to the participants of Health Accounts rationale and objectives.

Until now, the medical records were located scattered throughout the various actors in their

own offices and institutions. In the future, the information can be stored in a separate folder for each of the Finnish Taltioni. New applications for the development of this information is desired, easily but securely utilized to monitor the status of your health. This is needed for example for use with smart phones applications.

#### Award-winning in two categories

Turku Science Park Ltd carried out VARMO project was organized as a part of the October-November Taltioni and Microsoft technology in the development of applications-oriented event. ICT into the house met for more than forty interested in the subject.

Thursday started the event continued with a presentation on Friday, ideas and best rewards. The competition was divided into two categories of awards: The best concept and best technology. Technically, the best application was awarded the asthma self-management focused on the development of the application.

- The application allows an asthmatic can save your measurement data Taltioni service as well as receive feedback on the results of the reminders of self-management support. In addition, the application allows you to keep track of the Meteorological Institute of pollen and other communications based on your location, says the group has been involved in winning Heidi Parisod.

The winning idea will participate in the Finnish Online Democracy Association and Forum Virium organize Apps4Finland the race, which is to introduce new technology, data, and connecting people to the information acts.

Technically, the best application developed by students of the University **Natalia Diaz Rodriguez , Stefan Grönroos , Peter Garfield , Shohreh Hosseinzadeh and Anders Berg** . The application allows you to monitor your alcohol consumption. In addition to the software application also included a breath analyzer.

*Coding is not just a boys' thing to do: Codefestissa there were also plenty of girls.*

*VARMO is co-financed by the European Social Fund and the Turku Science Park Ltd. The project carried out, the aim of which is to create new mobile business in Southwest Finland.*

*Codefestin partners include the Turku Science Park Ltd, Taltioni, Fujitsu, Medixine, Microsoft, Sitra, TUCS, Turku University of Applied Sciences, University of Turku and the European Social Fund and the lever from the EU for the period 2007-2013.*
